

EP08: learned-prior 2× contour SR vs classical MAP-TV

(a) Synthetic TCForg benchmark
(HR highpass GT domain, $n = 32$ frames)

All four methods exceed 18 dB highpass PSNR on the TCForg GT benchmark, confirming the forward/highpass wrapper is geometry-correct before trusting real-data numbers in (b).

(b) Real 32-frame patch comparison
(seed=42 split, all rows gate=complete)
