

Split-half agreement in a structure-free region

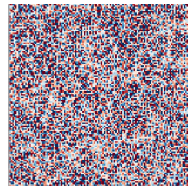

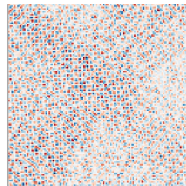

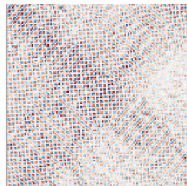

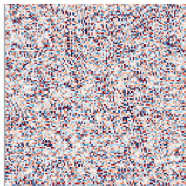

Drizzle
half-half $r = 0.15$

TGV
half-half $r = 0.84$

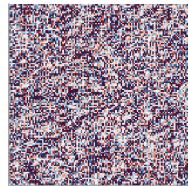

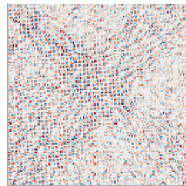

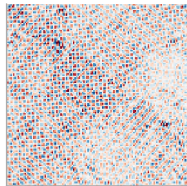

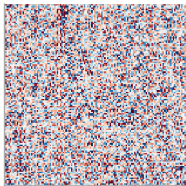

Ours, v6 pool
half-half $r = 0.70$

Ours, v9 3k
half-half $r = 0.11$

half A

half B

300 μm

Flat ROI, 25-40 μm band. Split-stable texture (TGV, v6) is what self split-half FRC rewards --- hence cross-FRC vs drizzle as metrology (fig31/32).
