

Unrolled solver: primitive ancestor $\rightarrow$ champion (same real-session center detail, $3\times$ zoom)

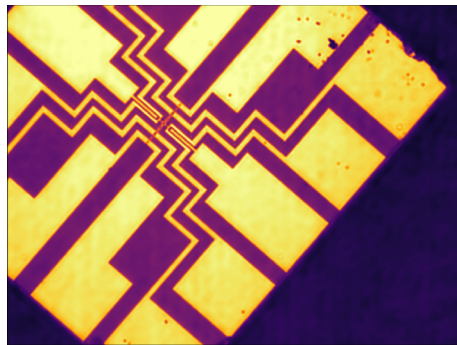

v4 solver
(ACL-027, 20k)

v5 hybrid solver
(ACL-029, 20k) — Fig 12

depb9v6 champion
(v21 / v6 pool, 30k)

Cumulative project progress across training pool (v4 $\rightarrow$ v5-sharp $\rightarrow$ v6), loss/metric redesign (ACL-027) and grid-convention fix (ACL-049), and matured halo=96 inference (v21) — not a controlled ablation. Each panel is a pre-rendered temperature map with its own auto-scale (fig12 convention); absolute levels are not comparable across panels. Comparison is of structure/sharpness.
