

v5-hybrid vs champion vs classical over registered optical GT (serpentine detail) — sharpest $\neq$ best on the honest metric (FRC = corrected cross-FRC@30 μ m vs drizzle)

v5 re-inferred through current pipeline (0 param mismatch), aligned to the champion grid (0.6 HR px registration offset removed). Punchline: v5 looks the sharpest by eye yet scores 0.626 — below the champion 0.661 and TGV 0.702. Its crispness is largely the ACL-029 background waffle, which corrected cross-FRC vs independent drizzle does not credit.
